Capstone project

Introduction-Business Problem

Introduction :

There are many investors which investigates in restaurants but there investment do not success, that is not by chance, because off the place chosen, the behaviors of people in this place, the type of product that the buy do not   pay attention of client,

Problem Description:

Now, I have an investor who want to open a restaurant in Canada, Toronto, his fist problem that he don't know a better place, and he looking for a safety place, and his second problem is which type of dish that the can make to pay attention of all categories of people,

Target Audience:

To solve this problems, as data scientist my objective is to locate safety place in

Toronto, and   search in this place for what are the   preferable dish for people in

this place, by looking as the restaurants in this place what type of dish buy.

Please note that we gonna take into consideration population .
